                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to identifying (M1) a compound which modulates a human or murine caspase recruitment domain (CARD)-4L (long form) polypeptide with a by contacting the polypeptide with a test compound and determining the effect of the test compound on the activity of the polypeptide to identify a compound which modulates the polypeptide. The method may be adapted for identifying a compound which binds to the LRR (leucine rich repeat) domain of CARD-4. Also included is a method of identifying a candidate compound for modulating LPS (lipopolysaccharide) mediated activation of nuclear factor-kappa B (NF-kB), by providing a

harbouring LBS, exposing the cell to a test compound and measuring NF-kB cativation, where altered NF-kB activation polypeptide in the presence of activation, where altered NF-kB activation polypeptide in the presence of the test compound compared to the binding in the absence of the test compound indicates that the test compound is a candidate compound for modulating LPS-mediated activation of NF-kB. Modulators identified by (MJ) are useful for treating a disorder Naracterised by aberrant CARD-4. Protein or nucleic acid. Compounds that modulate the activity of CARD-4. The are useful to treat or diagnose disorders such as cancer, viral infections, autoimmune disorders e.g. systemic lupus erythematosus, immune-mediated glomerulonephritis and arthritis, immune disorders, such as multiple sclerosis, Hashimoto's thyroiditis, atopic conditions such as asthma, allergy, psoriasis, contact dermatitis gastrointestinal callergies, insulin-dependent diabetes, bacterial infections, including tuberculosis, and lepromatous leprosy, disorders of cell signalling and disorders of tissues. The present sequence is the human cDNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1268
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1328

The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-4L and CARD-4S. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly follicular lymphomas, carcinomas associated with mutations in p53, and covarian cancer), autoimmune disorders (such as systemic lupus erythematosus, immune-mediated glomerulonephritis), viral infections erythematosus, immune-mediated glomerulonephritis), viral infections (such as those caused by herpes viruses, poxylruses, and adenoviruses), neurological diseases (such as Alzeimer's disease, Parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of cerebellar degeneration), anaemia and the myelodysplastic syndromes. This polynuclectide sequence and the myelodysplastic syndromes. This polynuclectide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated Caspase Recruitment Domain (CARD) polypeptides (CARD-4L and CARD-4S) useful for diagnosing and treating e.g. Parkinson's and Alzheimer's disease, cancers and viral infections.

                                                                                                                                                                                                                                   à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, human CARD-4Z or murine CARD-4L (all splice variants of CARD-4) comprising the polypeptide. Also included is an isolated fusion protein, comprising the colypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide. The CARD polypeptide is useful in screening assays, colypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, detection diagnostic end pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic call death crophylactic treatments (in disease associated with apoptotic call death crophylactic treatments disorders (e.g. systemic lupus erythemacosus and immunodeficiency syndrome), neurological disease (e.g. systemic lupus erythemacosus chisease, parkinson's disease, amyotrophic lateral sclerosis, retinitis pigmentosa, spinal muscular arrophy and cerebellar degeneration), haematological diseases (e.g. anaemia, neutropaenia and myelodysplastic syndromes), myocardial infaction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind too interact with other CARD proteins. Also disclosed are CARD-3 proteins and cDAMA. The gene for human CARD-4 is located on chromosome 7. The present sequence is a human constant and stroke of the constant sequence is a human constant and stroke of the constant sequence is a human constant and stroke of the constant sequence is a human constant and stroke of the constant sequence is a human constant and stroke of the constant sequence is a human constant constant sequence is a human constant sequence is a human constant sequence is a part and constant sequence is a part of the constant sequence is a part of the constant sequence o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1268

This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the indentification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RIPZ, RICK and CARDIAK) is known to be a mediator.

CARD-3 (also known as RIPZ, RICK and CARDIAK) is known to be a mediator.

CARD-4 (also known as RIPZ, RICK and CARDIAK) is known to be a mediator.

CARD-5 (a member of the tumour necrosis factor (TNF) family), and is mediated by this p75 neutrophin receptor. Accordingly these genes, and the proteins encoded thereof, are linked to certain disorders especies apoptosis is inhibited. These include cancer, autoliferating when apoptosis is inhibited. These include cancer, autolimmune disorders especies as those caused by the herpesvirus, neurological disorders such as cretinitis pigmentosa, haematologic diseases including chronic retinitis pigmentosa, haematologic diseases including chronic neutropenia, as well as myocardial infarction and strokes. The present compound alters the binding of CARD-3 to p75, which comprises measuring the binding of a polypeptide containing the CARD domain of CARD-3 to a polypeptide comprising the death domain of p75 in the presence and absence of the test compound, and determining if binding is altered. This polymucleotide is the human CARD-3 CDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CACTACTGACATCCAAGGAGAAGAATTTGCCAAAGTTATAGTACAAAAATTGAAAGATAA 1748

The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, human CARD-4Z or murine CARD-4L (all splice variants of CARD-4) collypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide covalently linked by a peptide bond to a heterologous polypeptide. The CARD polypeptide is useful in screening assays, ceed etection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prophylactic treatments (in diseases associated with apoptotic cell death company autoimmune disorders (e.g. systemic lupus erythematosus and immune related glomerulonephritis), viral infections, AIDS (acquired immune disorders (e.g. systemic lupus erythematosus and issuence, parkinson's disease, amyotrophic lateral sclerosis, retinitis disease, parkinson's disease, amyotrophic lateral sclerosis, retinitis pigmentoea, spinal muscular atrophy and cerebellar degeneration), susemital as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD
                amyotrophic lateral sclerosis; retinitis pigmentosa; spinal muscular atrophy; cerebellar degeneration; haematological disease; anaemia; neutropaenia; myelodysplastic syndrome; myocardial infarction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated human caspase recruitment domain (CARD)-4Y or CARD-4Z polypeptide, or murine CARD-4L polypeptide, useful in screening assays, detection assays, predictive medicine, and in therapeutic applications.
                                                                                                                                                                                                                                                                                                                                                                                          CARD-4L; CARD-4S; CARD-4Y; CARD-4Z; apoptosis; cancer; AIDS; autoimmune disorder; systemic lupus erythematosus; viral infection; immune related glomerulonephritis; acquired immunodeficiency syndrome; neurological disease; Alzheimer's disease; Parkinson's disease;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                       1 acctagtttatacccagata........6aacagcctgatgtgtaaaa 1669
